Enterprise Solution Bridging
Head Office and Field Operations

SYSTEM OVERVIEW

Glass Ops is a cross-platform enterprise solution designed to bridge the gap between head office operations and field personnel. The system consists of a centralized back-office web application and native mobile applications, seamlessly integrated via a secure web service.

TECH STACK

Database:
Microsoft SQL Server

Web Application:
.NET MVC &
Entity Framework (EF)

Mobile Application:
.NET MAUI

BACK-OFFICE WEB APPLICATION

Centralized administration
hub for multi-user
management, data
procieting, and scheduling.

NATIVE MOBILE APPLICATION

Field-ready app for surveyors
and fitters to receive tasks
and submit data.

INTEGRATION & COMMUNICATION

Secure REST API with JSON
payloads for seamless data
exchange and synchronization.

System Overview

Glass Ops is a cross-platform enterprise solution designed to bridge the gap between head office operations and field personnel. The system consists of a centralized back-office web application and native mobile applications, seamlessly integrated via a secure web service.

Tech Stack

- **Database:** Microsoft SQL Server
- **Web Application:** .NET MVC & Entity Framework (EF) Core
- **Mobile Application:** .NET MAUI (iOS and Android)
- **Communication:** REST API with JSON payloads

Component Architecture

The system is split into three core tiers to ensure scalability, security, and ease of maintenance:

1. Back-Office Web Application

- **Role:** Central administration hub for multi-user management, data processing, and scheduling.
- **Framework:** Built on **.NET MVC**, offering a robust and structured server-side rendered architecture.
- **Data Layer:** Utilizes **Entity Framework** as the Object-Relational Mapper (ORM) for secure, efficient object-relational mapping and database migrations.
- **Storage:** Backed by **Microsoft SQL Server** for enterprise-grade relational data storage, security, and transactional integrity.

2. Native Mobile Application

- **Role:** Field-ready application for remote workers, surveyors, and fitters to receive tasks and submit data.
- **Framework:** Built using **.NET MAUI**, leveraging a single C# codebase to compile into high-performance, native applications for both **iOS** and **Android**.

3. Integration & Communication Layer

- **Protocol:** Stateless **REST API** hosted by the back-office web application.
- **Data Interchange:** Standardized **JSON** formats ensure lightweight and rapid serialization between the client devices and the server.
- **Security:** Covered by industry-standard encryption and token-based authentication to secure all transit data

Integration Capabilities

The system can be configured with custom REST APIs or ODBC drivers to facilitate seamless, bi-directional data synchronization with existing enterprise database systems.

By utilizing a mirrored database schema between the back-office system and the mobile client, we eliminate complex data-mapping layers. This structural alignment ensures seamless, low-overhead data transfer via a lightweight REST API, simplifying maintenance and accelerating the implementation of new features.

Job Header Record

A **Job Header** is initialized using data from the Diary Job and synced to the mobile application, where onsite surveying and fitting details are captured. Once complete, the record is transmitted back to the Back Office. For any initial survey or fitting assignment, a new Job Header is generated—inheriting relevant existing data as needed. A finalized, full header consolidates the comprehensive data from both the survey and fitting stages.

When a fitting job is generated for a contract, it typically inherits an existing Job Header Record that already contains the baseline job and survey data. The system duplicates this record, provisions a new **GUID**, and dispatches it to the mobile application as a fitting assignment. This duplication workflow can be mirrored for re-surveys, ensuring the technician receives all pre-existing data from the previous inspection.

Back Office - Diary

The back-office system allows users to create Customer and Contract records, which serve as the foundation for scheduling **Diary Jobs**.

There are three types of Diary Jobs, which generally follow a specific lifecycle:

- **Survey:** Normally scheduled first. A dedicated surveying agent visits the property to gather technical information and define the requirements for the installation.
- **Fitting:** Scheduled after the survey to carry out the main installation work.
- **Remedial:** Booked against the contract if the fitting job cannot be completed or if an issue/fault is identified afterward.

When booking a diary job, use the “**Include Recent Survey**” checkbox to control what data is sent to the mobile app:

1. **Fitting Jobs:** Always check this box. Fitters rely on the most recent survey details to complete their work accurately.
2. **Resurveys:** Check this box if the surveyor needs to review the previous data. However, if a completely unbiased, fresh survey is required, leave this box unchecked.

Select “**Request Repudiation**” if the insurer requires a formal denial of the claim due to wear and tear or poor workmanship. When enabled, the mobile app will include a repudiation form for the surveyor to fill out if they determine the damage was caused by these factors.

Filtering and Search

The diary offers three viewing options: **Month**, **Week**, and **All**. Both the Month and Week views display the current period, with left and right controls for easy navigation. The **All** view allows users to specify a custom date range to view a complete list of entries.

Additionally, a search box in the top right enables filtering by contract number, customer name, or agent code. This search is persistent, remaining active as a filter even when navigating between weeks, months, or different date ranges.

Mobile Application - Surveying

The mobile application receives survey jobs assigned to individual agents, providing all relevant information required to complete the inspection. This includes customer details, property location, a description of the damage, and specific job instructions.

During the survey, the surveyor is required to complete a series of questions covering:

- Health and safety requirements
- Tools and equipment required
- General observations and notes
- Details of items that require repair or replacement

Items requiring attention are categorised as follows:

- **uPVC** – may include panel and/or glass components
- **Aluminium** – may include panel and/or glass components
- **Timber** – may include panel and/or glass components
- **Panel Only**
- **Glass Only**
- **Garage Doors**
- **Bi-folding Doors**
- **Locking Systems**
- **Composite Doors**– may include panel and/or glass components
- **Conservatories**
- **Greenhouses and Sheds**

Each item can be supported by drawings, photographs, and videos of the overall job, providing the back-office team with a clear understanding of the survey requirements and any identified issues.

Photos and Videos

Photographs are taken at 1920 x 1080 resolutions and can be taken in quick succession just by tapping on the screen. A photo browser allows users to review the photos taken and delete ones they don't need.

Videos are compressed to 720 and uploaded in chunks to ensure low data usage and smooth upload process even if the videos are long.

Job Instructions

Job instructions are created at head office and displayed in HTML format, complete with embedded images and links.

Job Instructions

1. Aperture Measurements

- Width:** Measure from brickwork to brickwork (or reveal to reveal) at the top, middle, and bottom of the opening. Record the smallest measurement.
- Height:** Measure from the sill to the top of the reveal at the left, center, and right. Record the smallest measurement.
- Squareness:** Measure diagonally from the top-left to bottom-right, and top-right to bottom-left. If the diagonals differ by more than 10mm, the opening is out of square.

2. Manufacturing Sizes

- For a straightforward brick-to-brick installation, deduct 10mm from your smallest width and smallest height. This creates a 5mm gap on all sides for sealing, expansion, and a plumb fit.

3. Structural and Placement Checks

- Positioning:** Ensure the new window sits at least 30mm back into the cavity to prevent damp and thermal bridging.
- Sub-sill Check:** Assess the existing sill. Allow for a minimum overhang of 25mm to 40mm off the external face of the brickwork to ensure water run-off.
- Obstructions:** Check for internal cables (electrics, alarms), curtain rails, and verify the presence of a lintel above the window.

4. Regulatory and Specification Notes

- Building Regulations:** Note if toughened or safety glass is required (e.g., if the window

Back Office - Surveys

Completed surveys are transmitted via mobile data as JSON payloads to the back-office API, where they are stored in the database alongside associated drawings, photos, and videos. On the diary page, jobs with any surveys feature a purple border for quick identification. Clicking a diary entry opens a booking details page that lists all completed actions (surveys, fittings, or remedials). Selecting "View" reveals a comprehensive job summary, a list of completed items, front-of-house photos, and any recorded videos.

When a door item is made of **UPVC, Timber, Aluminium, or Composite**, it may have an associated panel or glass item. These related items are linked by their item number and are displayed on the details page directly beneath the main item details.

Mobile Application - Fitting

The mobile application delivers assigned fitting jobs to field agents, who typically operate as part of a team equipped with a service van. Through the app, fitters can access job instructions, required delivery items, and reference data previously logged by the surveyor. To complete a job, the fitter must record usage details and a job summary, and secure digital signatures from both themselves and the customer to execute the mandate. 5 Photographs of the completed work must be taken as evidence for the stakeholder.

Mobile Application - Spot Checks

Spot Checks are initiated through the Mobile App by a user who intends to visit the site of a job scheduled for that day. The user must enter the contract number of a diary job that is booked for the current day.

The app then checks the Back Office to verify whether a job for that contract is scheduled on that date. If a matching job is found, the job details are returned to the app for review.

The user must confirm that the information is correct before proceeding to complete the Spot Check form. The form includes assessments of the engineer's appearance, quality of work, and customer satisfaction, as well as details relating to PPE compliance and the condition of tools and equipment.

Photographs are taken and signatures are required to complete the Spot Check. Once all information has been entered, the completed Spot Check is submitted to the back office for review and record-keeping.

The screenshots illustrate the Spot Check process in a mobile application. The first screenshot shows the 'Spot Check' screen with a contract number '00000678' and a 'Get Contract' button. A confirmation dialog asks 'Is this the correct contract?' with 'No' and 'Yes' options. The second screenshot shows the job details for contract '00000678' on '12/07/2026' at '18:10' for 'Billy Bob' at '45 Low Road', 'Salford SA11ER', '07777777777'. The third screenshot shows the 'Progress when reviewed' section with buttons for 'Arrived', 'Set Up', 'Ongoing', and 'Completed', all set to 'Yes'. The fourth screenshot shows the 'Work items reviewed' section with buttons for 'Door', 'Window', 'Garage Door', 'Glass', 'Locks', 'Other', 'Materials', and 'uPVC', with 'Door' set to 'Yes', 'Window' to 'No', 'Garage Door' to '?', 'Glass' to 'Yes', 'Locks' to '?', 'Other' to '?', 'Materials' to '?', and 'uPVC' to '?'.

Mobile Application - Tool Checks

Weekly Tool Checks must be completed via the mobile application. The app provides a checklist of individual items required for daily use. For each item, users must confirm two fields: **“Available on request”** and **“Fit for purpose.”** To submit the check, it must be linked to the branch, vehicle registration, and fitter's name, and requires both a signature and a photograph.

Mobile Application - Ladder Checks

Weekly Ladder Checks must be completed via the mobile application to ensure all equipment is safe for use. The app features a series of condition-based questions designed to identify and report damage early, protecting both the fitter and the company from liability in the event of an accident. Each check is automatically linked to the vehicle registration, ladder number, and ladder type. To finalize the inspection, the fitter can add comments and both the fitter and manager must sign to confirm completion.

The first screenshot shows the 'Ladder Check' form with fields for 'Checked Date' (20/07/2026), 'Branch Code' (BOLT), 'Ladder Number' (2355), 'Ladder Type' (Extending Ladder), and 'Registration'. Below these are several condition-based questions with dropdown menus for responses: 'Does the ladder look in reasonable condition?', 'Are any rungs missing or loose?', 'Are the stiles (outside uprights) damaged or bent?', 'Are there any cracks?', 'Is there corrosion to any part of the ladder?', and 'Has the ladder got slip-resistant rubber?'. The second screenshot shows the 'Comments' section with a text area and a 'Save' button. The third screenshot shows the 'Signature' screen with a 'Ladder check signature' field, a 'Please sign here:' prompt, a signature area, and a 'Save' button.

Back Office - Ladder Checks

Completed ladder checks are available to view by managers in the back office system.

The first screenshot shows the 'Ladder Checks' table in the back office system. The table has columns for 'Date Completed', 'Branch', 'Ladder Type', 'Vehicle Registration', and 'Fitter / Surveyor Name'. The second screenshot shows the 'Ladder Check' details for a specific check. It includes fields for 'Date Completed' (30/06/2026), 'Branch' (BOLT), 'Vehicle Registration' (rer ere), and 'Fitter / Surveyor Name' (billy bob). Below these are several condition-based questions with dropdown menus for responses: 'Any Rungs Missing or Loose?', 'Any Sharp Edges or Metal Splinters?', 'Any Stiles Damaged or Bent?', 'Any Corrosion Found?', 'Any Cracks Found?', 'Any General Damage Detected?', 'Any Rungs Dented?', 'Has the Ladder Ever Been Repaired?', 'In Reasonable Overall Condition?', 'Inspector Comments', 'Has Ladder Been Painted or Decorated?', and 'Rubber/Plastic Feet Intact & Secure?'. The 'Signatures' section shows two signature areas: 'billy bob' and 'manager 1sdf'. Below the signatures is a photograph of a ladder step.

Mobile Application - Work Accident

Workplace accidents and near misses must be logged via the mobile application to maintain an accurate event record. Fitters have the option to report near misses anonymously, allowing head office to identify potential hazards, safeguard staff, and implement preventative measures for the future.

Mobile Application - Vehicle Checks

Vehicle Checks are conducted weekly at each branch. The mobile application retrieves a localized fleet list, which includes Delivery HGVs, Delivery Vans, Fitter Vans, and Sales Cars. For each vehicle inspected, the user must complete a dedicated checklist and capture photographs of all four sides. Any identified damage, scratches, or defects must be documented directly on the provided vehicle diagrams.

Mobile Application - Mileage Sheets

Surveyors record their mileage daily using the mobile application. Each day requires two dashboard photographs—one in the morning and one at the end of the working day—both automatically time-and-date stamped for verification by head office. Alongside these images, users submit a form detailing their mileage, start and end postcodes, toll charges, and any relevant comments. Finally, the claimant must sign the form to confirm the accuracy of the details.

The image displays three screenshots of a mobile application interface for recording mileage.

Left Screenshot: Mileage Sheet

- Sheet Date: 19/06/2026
- Claimant Name: _____
- Registration: Ggg
- Start Postcode: Bb
- Finish Postcode: Yg
- Start Mileage: 5586
- Finish Mileage: 588
- Comments: Gggh
- Other places: 0/10
- TollCharges: No
- Dashboard Photo: [Checkmark icon]
- Signature: [Signature button]
- Save: [Save button]

Middle Screenshot: Mileage Sheet

- Finish Mileage: 588
- Comments: Gggh
- Other places: 0/10
- TollCharges: No
- Dashboard Photo: [Checkmark icon]
- Signature: [Signature button]
- Save: [Save button]

Right Screenshot: Signature

- I confirm that the mileage claimed is a true and accurate account of the actual mileage used solely for the business of [CompanyName] and understand that any claim found to be deliberately exaggerated will result in disciplinary action being taken by [Company Name].
- [Handwritten signature]
